

Predicting Plant Growth Stages with Environmental and Management Data Using Power BI

Introduction:

XYZ Company, renowned for its innovative approach in agriculture, is embarking on a project to optimize plant growth through advanced data analytics and visualization techniques using Power BI. The project focuses on analyzing a comprehensive dataset containing key environmental and management factors such as soil type, sunlight hours, water frequency, fertilizer type, temperature, and humidity.

By leveraging this data, the company aims to predict the growth milestones of plants, which are crucial for understanding the conditions that promote optimal growth. This project will involve the creation of interactive dashboards and predictive models to uncover patterns and insights that can inform and improve agricultural practices and greenhouse management.

The analysis will be conducted using a decomposition tree to break down growth milestone counts by various factors, providing a clear view of the impact of each variable. Additionally, the project will include the development of several calculated columns and measures to enhance the dataset's analytical depth.

Visualizations such as clustered bar charts, pie charts, scatter plots, and column charts will be utilized to present the findings effectively. By implementing this solution, XYZ Company aims to enhance crop yields, optimize resource allocation, and promote sustainable agricultural practices, ultimately solidifying its position as a leader in agricultural innovation.

Scenario 1:

ABC Greenhouses has been facing challenges with inconsistent plant growth across its different greenhouse locations. By leveraging Power BI, the company plans to identify the best combination of soil type, sunlight hours, and watering frequency that leads to the highest growth milestones. The decomposition tree will help break down growth milestone counts by these factors, revealing that loam soil combined with daily watering and 6-8 hours of sunlight yields the best results. This insight will enable ABC Greenhouses to standardize these conditions across all locations, improving overall plant health and productivity.

Scenario 2:

GreenEarth Farms has noticed varying growth rates in their organic crops and wants to ensure consistency in their yield. By analyzing the dataset, the company discovers that organic fertilizer combined with loam soil and bi-weekly watering leads to the most significant growth milestones. The decomposition tree further reveals that maintaining temperatures between 20-30°C and humidity levels between 50-70% optimizes plant growth. GreenEarth Farms will use these insights to adjust their farming practices, ensuring their crops achieve the best possible growth under organic farming conditions.

Scenario 3:

FutureGrow Tech has been developing smart farming solutions but needs to validate their technology's effectiveness under different conditions. By using Power BI to analyze the dataset, the company identifies that their smart sensors for monitoring soil moisture and adjusting water frequency in real-time significantly improve growth milestones. The decomposition tree analysis reveals that these sensors work best with sandy soil and weekly organic fertilizer application, under moderate temperature and humidity conditions. FutureGrow Tech will integrate these findings into their product development, enhancing their technology to offer precise and effective agricultural solutions.

Technical Architecture:

Project Flow:

To accomplish this, we have to complete all the activities listed below,

- ❖ Data Collection & Extraction from Database
 - Collect the dataset,
 - Storing Data in DB
 - Perform SQL Operations
 - Connect DB with Power Bi
- ❖ Data Preparation
 - Prepare the Data for Visualization
- ❖ Data Visualizations
 - No of Unique Visualizations
- ❖ Dashboard
 - Responsive and Design of Dashboard
- ❖ Report
 - Responsive and Design of Dashboard
- ❖ Performance Testing
 - No of Visualizations/ Graphs
- ❖ Project Demonstration & Documentation
 - Record explanation Video for project end to end solution
 - Project Documentation-Step by step project development procedure

Milestone 1: Data Collection & Extraction from Database

Data collection is the process of gathering and measuring information on variables of interest, in an established systematic fashion that enables one to answer stated research questions, test hypotheses, and evaluate outcomes and generate insights from the data.

Activity 1: Collect the dataset

Please use the link to download the dataset: [Link](#)

Activity 1.1: Understand the data

- Data contains all the meta information regarding the columns described in the CSV files

Column Description of the Dataset:

- Soil_Type: The type or composition of soil in which the plants are grown.
- Sunlight_Hours: The duration or intensity of sunlight exposure received by the plants.
- Water_Frequency: How often the plants are watered, indicating the watering schedule.
- Fertilizer_Type: The type of fertilizer used for nourishing the plants.
- Temperature: The ambient temperature conditions under which the plants are grown.
- Humidity: The level of moisture or humidity in the environment surrounding the plants.
- Growth_Milestone: Descriptions or markers indicating stages or significant events in the growth process of the plants.

Activity 2: Connect Data with Power BI

- With Power BI, users can seamlessly connect to a wide range of data sources, including databases, cloud services, spreadsheets, and streaming data. This capability allows organizations to consolidate disparate data sources into a single, unified platform, breaking down data silos and enabling holistic analysis.

Milestone 2: Data Preparation

Data preparation is a critical phase in the data lifecycle, encompassing activities that transform raw data into a format suitable for analysis. This multifaceted process involves several steps including data cleaning, integration, transformation, and enrichment. Data cleaning involves identifying and rectifying errors, inconsistencies, and missing values within datasets to ensure accuracy and reliability.

Activity 1: Prepare the Data for Visualization

- Preparing the data for visualization involves cleaning the data to remove irrelevant or missing data, transforming the data into a format that can be easily visualized, exploring the data to identify patterns and trends, filtering the data to focus on specific subsets of data, preparing the data for visualization software, and ensuring the data is accurate and complete.
- This process helps to make the data easily understandable and ready for creating visualizations to gain insights into the performance and efficiency.

Milestone 3: Data Visualization

Data visualization is the process of creating graphical representations of data in order to help people understand and explore the information. The goal of data visualization is to make complex data sets more accessible, intuitive, and easier to interpret.

By using visual elements such as charts, graphs, and maps, data visualizations can help people quickly identify patterns, trends, and outliers in the data.

Activity 1.1: Water Frequency According to Its Soil Type

Insight: Loam soil with high water frequency results in the highest total water frequency, indicating that loam soil may require or benefit from more frequent watering compared to sandy and clay soils.

< Back to report		WATER FREQUENCY ACCORDING TO ITS SOIL TYPE		
Soil_Type	High	Moderate	Total	
☐ loam	191.61	205.65	397.25	
weekly	45.06	51.26	96.31	
daily	64.02	54.73	118.75	
bi-weekly	82.53	99.66	182.19	
☐ sandy	215.43	217.46	432.88	
bi-weekly	33.29	60.49	93.78	
weekly	35.27	70.65	105.92	
daily	146.87	86.32	233.19	
☐ clay	280.24	207.13	487.37	
bi-weekly	59.80	68.15	127.95	
daily	95.42	40.66	136.09	
weekly	125.02	98.32	223.34	
Total	687.28	630.24	1,317.51	

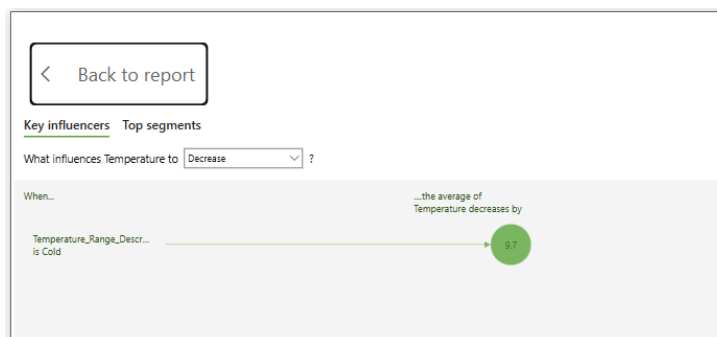

Activity 1.2: Average Temperature by Temperature Range Description

Insight: Moderate temperature ranges have the highest average temperature increase, suggesting that plants in this range experience the most growth.

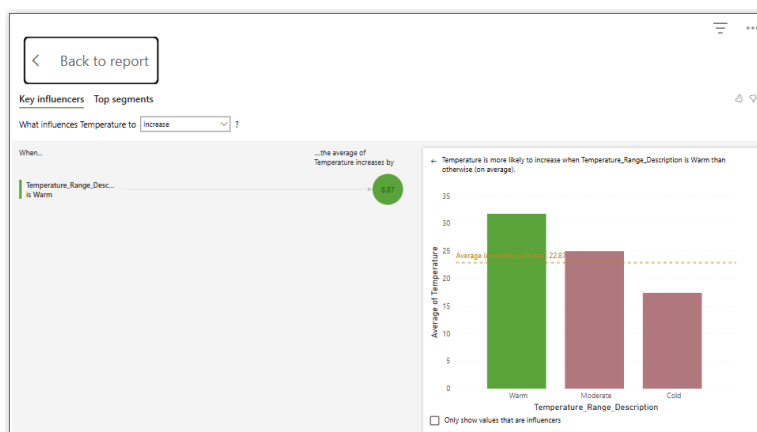

Activity 1.3: Temperature and Its Description According to Plant Growth

Insight: Cold temperature range decreases plant growth, highlighting the negative impact of cold temperatures on plant development.

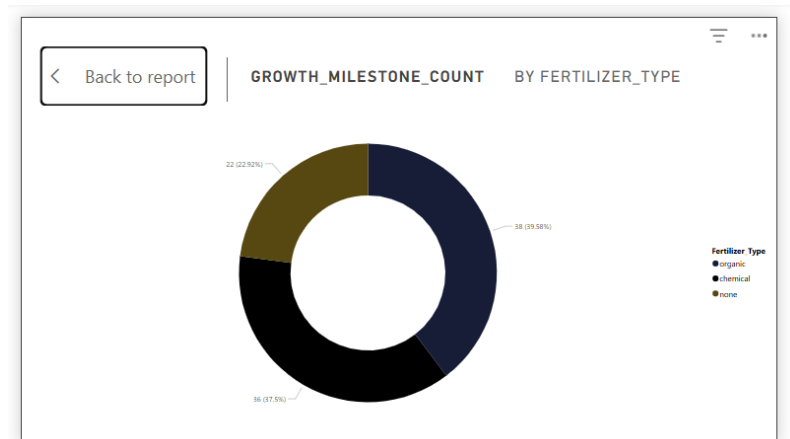

Insight: Warm temperature range increases plant growth, highlighting the positive impact of warm temperatures on plant development.

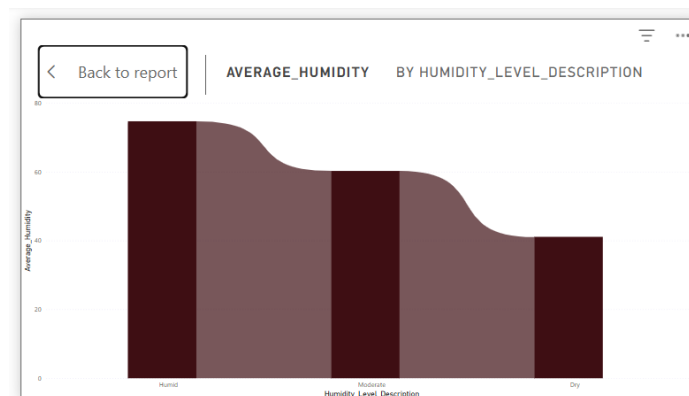

Activity 1.4: Growth Milestone Count by Fertilizer Type

Insight: Chemical fertilizers account for the highest growth milestone count, indicating their effectiveness in promoting plant growth milestones compared to organic fertilizers or no fertilizer.

Activity 1.5: Average Humidity by Humidity Level Description

Insights: Humid conditions lead to the highest average humidity, emphasizing the importance of maintaining high humidity levels for optimal plant growth.

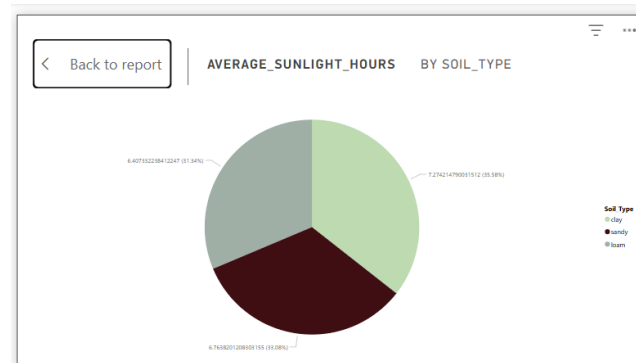

Activity 1.6: Growth Milestone Count According to Its Soil Type

Insights: Loam soil has the highest growth milestone count, suggesting it is the most conducive soil type for achieving plant growth milestones.

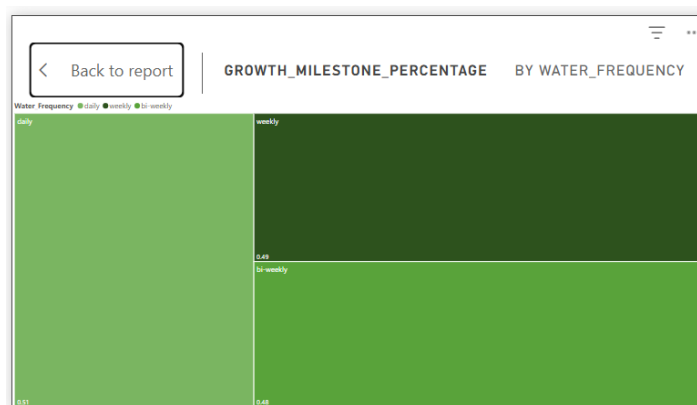

Activity 1.7: Average Sunlight Hours by Soil Type

Insights: Sandy soil receives the highest average sunlight hours, which may contribute to its growth performance under sufficient light conditions.

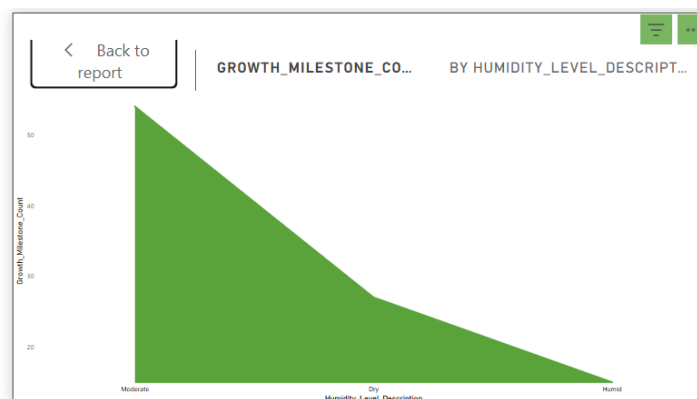

Activity 1.8: Growth Milestone Percentage by Water Frequency

Insights: Daily watering results in the highest percentage of growth milestones, showing that frequent watering is crucial for plant growth.

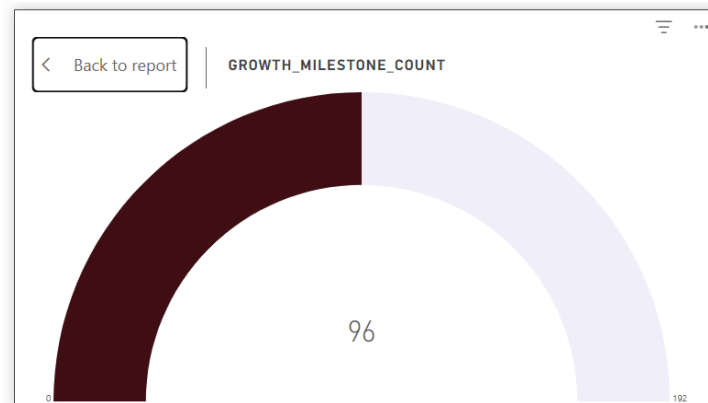

Activity 1.9: Growth Milestone Count by Humidity Level Description

Insights: Humid conditions lead to the highest growth milestone count, reinforcing the importance of maintaining adequate humidity levels for optimal growth.

Activity 1.10 : Growth Milestone Count

Insights: The total growth milestone count is 96, with the highest contributions coming from environments with optimal humidity and temperature conditions.

Activity 1.11: Average Humidity, Average Temperature, Average Sunlight Hours

Insights: The data indicates a temperate and comfortable climate with an average temperature of 25.08°C, moderate humidity of 58.16%, and a reasonable amount of sunlight averaging 6.76 hours per day.

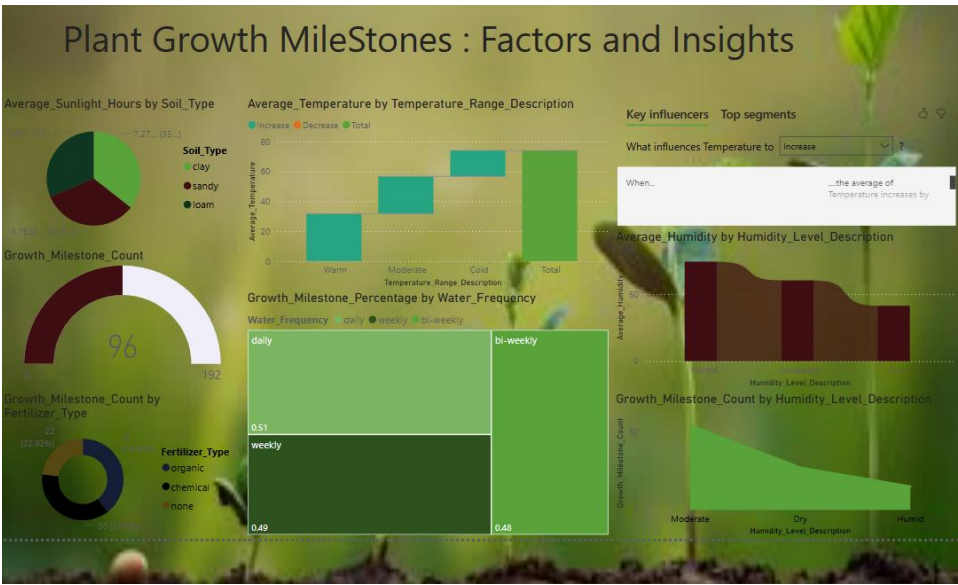

Milestone 4: Dashboard

A dashboard is a graphical user interface (GUI) that displays information and data in an organized, easy-to-read format. Dashboards are often used to provide real-time monitoring and analysis of data, and are typically designed for a specific purpose or use case. Dashboards can be used in a variety of settings, such as business, finance, manufacturing, healthcare, and many other industries. They can be used to track key performance indicators (KPIs), monitor performance metrics, and display data in the form of charts, graphs, and tables.

Activity :1- Responsive and Design of Dashboard

Once you have created views on different sheets in Power Bi you can pull them into a dashboard.

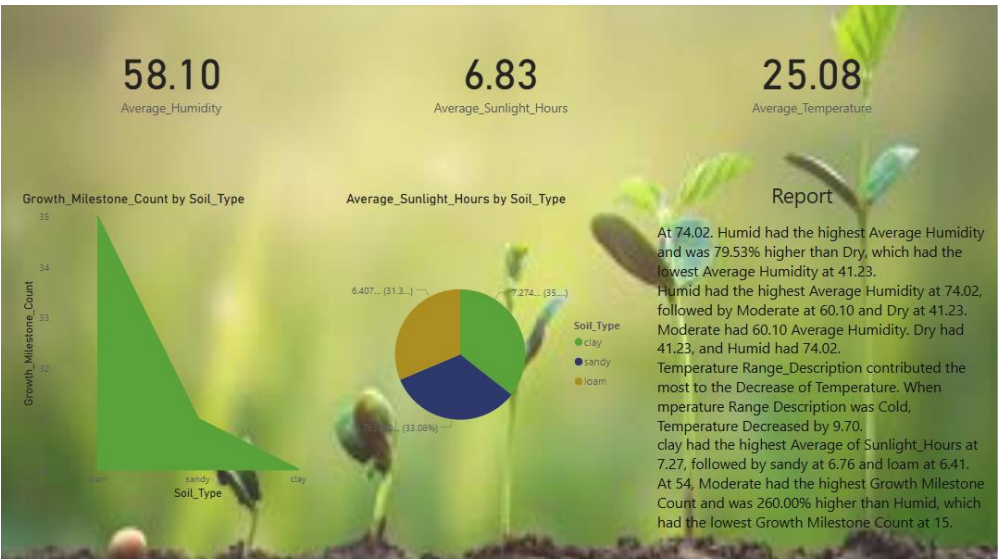

Dashboard:

Milestone 5: Report

A data report is a way of presenting data and analysis in a narrative format, with the goal of making the information more engaging and easier to understand. A data story typically includes a clear introduction that sets the stage and explains the context for the data, a body that presents the data and analysis in a logical and systematic way, and a conclusion that summarizes the key findings and highlights their implications. Data Report can be told using a variety of mediums, presentations, interactive visualizations, and videos.

Report:

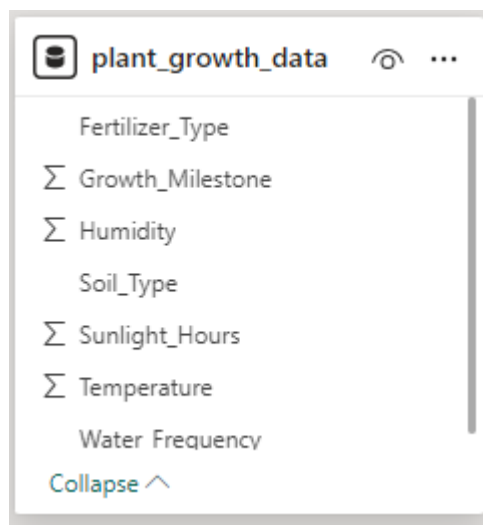

Milestone 7: Performance Testing

Performance testing is a crucial aspect of software development aimed at evaluating the speed, responsiveness, stability, and scalability of an application under various workload conditions. It involves simulating real-world usage scenarios to assess how the system behaves and performs under stress, peak loads, or normal conditions.

Activity 1: Amount of Data Loaded

"Amount of Data Loaded" refers to the quantity or volume of data that has been imported, retrieved, or loaded into a system, software application, database, or any other data storage or processing environment. It's a measure of how much data has been successfully processed and made available for analysis, manipulation, or use within the system.

Activity 2 : Utilization of DAX Expressions

DAX (Data Analysis Expressions) in Power BI is a powerful formula language used to create custom calculations in calculated columns, measures, and tables. DAX expressions can be employed to manipulate data and perform complex calculations that are not possible with basic aggregations. They are similar to Excel formulas but are designed for relational data and can include functions for aggregation, time intelligence, and table manipulation. Understanding DAX is essential for unlocking the full potential of Power BI, as it allows users to create dynamic, interactive reports and dashboards that provide deep insights into data.

Activity 2.1: Average Humidity as “Measure”

```
1 Average_Humidity = AVERAGE(plant_growth_data[Humidity])
```

Activity 2.2: Average Sunlight Hours as “Measure”

```
1 Average_Sunlight_Hours = AVERAGE(plant_growth_data[Sunlight_Hours])
```

Activity 2.3: Average Temperature as “Measure”

```
1 Average_Temperature = AVERAGE(plant_growth_data[Temperature])
```

Activity 2.4: Growth Milestone Count as “Measure”

```
1 Growth_Milestone_Count =  
2 COUNTRROWS(  
3     FILTER(  
4         plant_growth_data,  
5         plant_growth_data[Growth_Milestone] = 1  
6     )  
7 )  
8
```

Activity 2.5: Growth Milestone Percentage as “Measure”

```
1 Growth_Milestone_Percentage =  
2 DIVIDE(  
3     [Growth_Milestone_Count],  
4     COUNTRROWS(plant_growth_data),  
5     0  
6 )  
7
```

Activity 2.6: Water Frequency Numeric as “New Column”

```
1 Water_Frequency_Numeric =  
2 SWITCH(  
3     [Water_Frequency],  
4     "daily", 1,  
5     "bi-weekly", 2,  
6     "weekly", 3,  
7     BLANK()  
8 )  
9
```

Activity 2.7: Temperature Range as “New Column

```
1 Temperature_Range =  
2 SWITCH(  
3     TRUE(),  
4     [Temperature] < 15, "Low",  
5     [Temperature] >= 15 && [Temperature] < 25, "Moderate",  
6     [Temperature] >= 25, "High"  
7 )  
8
```

Activity 2.8: Humidity Range as “New Column

```
1 Humidity_Range =  
2 SWITCH(  
3     TRUE(),  
4     [Humidity] < 40, "Low",  
5     [Humidity] >= 40 && [Humidity] < 60, "Moderate",  
6     [Humidity] >= 60, "High"  
7 )  
8
```

Activity 2.9: Humidity Level Description as “New Column”

```
1 Humidity_Level_Description =  
2 SWITCH(  
3     TRUE(),  
4     [Humidity] < 30, "Very Dry",  
5     [Humidity] >= 30 && [Humidity] < 50, "Dry",  
6     [Humidity] >= 50 && [Humidity] < 70, "Moderate",  
7     [Humidity] >= 70 && [Humidity] < 90, "Humid",  
8     [Humidity] >= 90, "Very Humid"  
9 )  
10
```

Activity 2.10: Temperature Range Description as “New Column”

```
1 Temperature_Range_Description =  
2 SWITCH(  
3     TRUE(),  
4     [Temperature] < 10, "Very Cold",  
5     [Temperature] >= 10 && [Temperature] < 20, "Cold",  
6     [Temperature] >= 20 && [Temperature] < 30, "Moderate",  
7     [Temperature] >= 30 && [Temperature] < 40, "Warm",  
8     [Temperature] >= 40, "Hot"  
9 )  
10
```

Activity 2.11: Growth Milestone Description as “New Column”

```
1 Growth_Milestone_Description =  
2 SWITCH(  
3     [Growth_Milestone],  
4     0, "Early Stage",  
5     1, "Mature Stage",  
6     "Unknown Stage"  
7 )  
8
```

Activity 2.12: Plant Growth Category as “New Column”

```
1 Plant_Growth_Category =  
2 SWITCH(  
3     [Growth_Milestone],  
4     0, "Initial Growth",  
5     1, "Advanced Growth",  
6     "Uncategorized"  
7 )  
8
```

Milestone 8: Project Demonstration & Documentation

Below mentioned deliverables to be submitted along with other deliverables

Activity: Record explanation Video for project end to end solution
